NovaTech Solutions - IT Security Policy

1. Passwords and Access

All passwords must be at least 14 characters long and must be changed every 180 days. Multi-factor authentication (MFA) is mandatory for email, the NovaHR portal, and all cloud systems. Sharing passwords with anyone, including IT staff, is not allowed.

2. Devices

Every company laptop has full-disk encryption enabled and must lock automatically after 5 minutes of inactivity. USB storage devices are blocked by default. An employee who needs USB access must raise a ticket with the IT Helpdesk and get written approval from the Security Team.

Installing software that is not on the approved list requires an approved IT ticket. Employees must never install software from unknown websites.

3. Remote Access

When working outside the office, employees must connect through NovaVPN before opening any internal system. Public Wi-Fi may only be used together with NovaVPN.

4. Data Classification

NovaTech data is classified into four levels: Public, Internal, Confidential, and Restricted. Restricted data, such as customer payment details, must never be sent by email or stored on personal devices.

5. Reporting Incidents

Any suspected security incident, such as a lost laptop or a phishing email that was opened, must be reported to security@novatech.example within 1 hour. Suspicious emails should be reported using the Report Phishing button in the email client. Employees who report quickly will not be penalized.
